

BOOK REVIEW

Mohamed AlMoustafa Abdulghani Alsamarai, Laboratory Investigation Department, Samara University College of Applied Sciences (SUCOAS), Samara, Iraq.

Title: District Laboratory Practice in Tropical Countries

Part 1 Second Edition

Author: Monica Chessbrough

Publisher:

Part I Contents

Chapter 1 Organization and staffing of district laboratory services

- 1.1 Importance of laboratory practice in district health care
- 1.2 Structuring of a district laboratory network.
- 1.3 Training and continuing education of district laboratory personnel
- 1.4 Code of conduct for laboratory personnel and status of medical laboratory practice

Chapter 2 Total quality management of district laboratory services

- 2.1 Ensuring a reliable and quality laboratory service
- 2.2 Selection of tests and interpretation of test results
- 2.3 Financing district laboratory services and controlling costs
- 2.4 Quality assurance and sources of error in district laboratory practice
- 2.5 SI Units
- 2.6 Guidelines for preparing stains and reagents
- 2.7 Communicating effectively.

Chapter 3 Health and safety in district laboratories

- 3.1 Implementing a laboratory health and safety programme.
- 3.2 Safe laboratory premise and personal safety measures
- 3.3 Microbial hazards
- 3.4 Decontamination of infectious material and disposal of laboratory waste
- 3.5 Chemical and reagent hazards
- 3.6 Equipment and glassware hazards
- 3.7 Fire safety
- 3.8 Emergency First Aid

Chapter 4 Equipping district laboratories

- 4.1 Selection, procurement and care of equipment
- 4.2 Power supplies in district laboratories
- 4.3 Microscope
- 4.4 Equipment for purifying water
- 4.5 Equipment for weighing
- 4.6 Equipment for pipetting and dispensing
- 4.7 Centrifuges
- 4.8 Laboratory autoclave
- 4.9 Incubator, water bath, heat block
- 4.10 Colorimeter
- 4.11 Mixers

4.12 General laboratory-ware for district laboratories

Chapter 5 Parasitological tests

5.1 Parasitology in district laboratories and quality assurance of tests

5.2 Features and classification of parasites of medical importance

5.3 Direct examination of faeces and concentration techniques

5.4 Identification of faecal protozoan trophozoites, cysts and oocysts

5.5 Identification of helminth eggs and larvae found in faeces

5.6 Examination of urine for *Schistosoma haematobium* eggs

5.7 Examination of blood for malaria parasites

5.8 Examination of blood, lymph fluid, and c.s.f for trypanosomes causing African trypanosomiasis

5.9 Examination of blood for *Trypanosoma cruzi*

5.10 Examination of specimens for *Leishmania* parasites

5.11 Examination of blood for microfilariae in lymphatic filariasis and loiasis

5.12 Examination of skin for *Onchocerca volvulus* microfilariae

5.13 Examination of sputum for *Paragonimus* eggs

5.14 Less frequently needed tests:

1 Investigation of amoebic liver abscess

2 Investigation of primary amoebic meningoencephalitis

3 Diagnosis of toxoplasmosis

4 Diagnosis of hydatid disease

5 Examination of muscle tissue for *Trichinella spiralis* larvae

6 Detection of *Dracunculus medinensis* (Guinea worm) larvae

Chapter 6 Clinical chemistry tests

6.1 Clinical chemistry in district laboratories

6.2 Quality assurance of clinical chemistry tests

6.3 Measurement of serum or plasma creatinine

6.4 Measurement of serum or plasma urea

6.5 Measurement of blood or plasma glucose

6.6 Measurement of serum or plasma bilirubin

6.7 Measurement of serum albumin

6.8 Measurement of serum or plasma alanine aminotransferase (ALT) activity

6.9 Measurement of serum or plasma *alpha* amylase activity

6.10 Measurement of sodium and potassium in serum or plasma

6.11 Urine tests

6.12 Cerebrospinal fluid (c.s.f) tests

6.13 Faecal tests

Appendix I

Preparation of reagents

Appendix II

Useful addresses

Appendix III

Useful charts and figures

Supplement

Planning a training curriculum for district laboratory personnel

Index

District Laboratory Practice in Tropical Countries

Part 2 Second Edition

Author: Monica Cheesbrough

Contents

Chapter 7 Microbiological tests

7.1 Microbiology practice and quality assurance in district laboratories

7.2 Features and classification of microorganisms of medical importance

7.3 Microscopical techniques used in microbiology

7.4 Culturing bacterial pathogens

7.5 Biochemical tests to identify bacteria

7.6 Examination of sputum

7.7 Examination of throat and mouth specimens

7.8 Examination of pus, ulcer material and skin specimens

7.9 Examination of effusions

7.10 Examination of urogenital specimens

7.11 Examination of faecal specimens

7.12 Examination of urine

7.13 Examination of cerebrospinal fluid (c.s.f.)

7.14 Culturing blood

7.15 Examination of semen

7.16 Antimicrobial susceptibility testing

7.17 Water-related diseases and testing of water supplies

7.18 Summary of the clinical and laboratory features of microorganisms

Bacterial pathogens

Fungal pathogens

Viral pathogens

COLOUR SECTION

Chapter 8 Haematological tests

8.1 Haematology in district laboratories and quality assurance

8.2 Functions of blood, haematopoiesis and blood disorders

8.3 Collection of blood

8.4 Measurement of haemoglobin

8.5 PCV and red cell indices

8.6 Counting white cells and platelets

8.7 Blood films

8.8 Erythrocyte sedimentation rate

8.9 Reticulocyte count. Methaemoglobin reduction test

8.10 Investigation of sickle cell disease

8.11 Investigation of bleeding disorders

Chapter 9 Blood transfusion tests

9.1 Blood transfusion services at district level and quality assurance

9.2 Blood donation and storage of blood

9.3 Blood grouping.

9.4 Compatibility testing

Details of Part 1

Appendix I

Preparation of reagents and culture media

Appendix II

Useful addresses

Index.

An interesting multi-disiplinary book for investigational tests at district level. The information presented in the book cover the requirement of investigations preparation, clinical chemistry, microbiological investigations, haematological investigations and parasitological investigations. The book is suitable for laboratory investigation students training. Additionally, the book is with simplified information for students studying pathological laboratory investigations, undergraduate and postgraduate microbiology studying students.
